CloudDesk CRM

RAG Knowledge Base for an AI Voice Sales Agent

Company: Sankar Group (project scenario)

Document purpose: A small, structured knowledge source for retrieval-augmented generation (RAG).

Important project note: This is a sample/demo knowledge base created from the product brief supplied for the project. Details explicitly marked “Not specified” must not be invented by the AI agent. Treat this as demo data, not verified public company policy.

What this document covers

- Product overview and target customer
- Plans, pricing, offer, and demo qualification
- Features and customer value
- Common objections and approved responses
- Sales discovery questions and qualification guidance
- Safe-answer rules for missing or uncertain information
- Example customer questions to test retrieval quality

Version 1.0 | Prepared for a portfolio/interview demonstration

1. Product Overview

Product name: CloudDesk CRM

Company: Sankar Group (as described in the supplied project brief)

Category: Customer relationship management (CRM) for sales teams.

Core purpose: Keep a team's sales pipeline in one shared place, provide automatic follow-up reminders, and integrate with WhatsApp. The intended alternative is managing leads across messy Excel sheets.

Ideal customer: Sales teams of approximately 10–20 people that currently track leads in Excel.

Main value proposition: Help the team work from a shared pipeline, reduce spreadsheet version conflicts, remember follow-ups, and use WhatsApp integration.

Setup claim: The supplied brief describes setup as fast, taking about five minutes. Do not promise that every customer will finish setup in exactly five minutes.

Approved short description

> CloudDesk CRM helps sales teams manage leads through one shared sales pipeline, automatic follow-up reminders, and WhatsApp integration—rather than relying on scattered Excel sheets.

2. Plans, Pricing, and Offer

Item	Known information	Agent guidance
Growth plan	■799 per user per month	State the price exactly. Clarify that it is per user, per month.
Free live demo	Available this week; no commitment	Offer it when the customer asks about a demo or shows buying interest. Confirm the actual slot before booking.
Other plans	Not specified	Do not invent plan names or prices.
Discounts / annual billing	Not specified	Do not promise a discount or annual rate.
Taxes / invoicing	Not specified	Do not assume whether taxes are included.
Trial period	Not specified; only a free live demo is stated	Do not describe the demo as a free trial.

Pricing example for qualification

For a team of 10 users, the listed Growth-plan price would total ■7,990 per month before any taxes or other charges, if applicable. Taxes and additional charges are not specified in the supplied brief, so the agent should not present this calculation as an all-inclusive final invoice.

If asked “How much for my whole team?” first ask how many users need access, then calculate ■799 × number of users per month. Clearly label it as a calculation from the listed per-user price.

3. Features and Customer Value

Feature	What is known	Customer value / safe wording
Shared sales pipeline	The team uses one shared pipeline.	“Your team can work from one shared pipeline instead of passing around separate spreadsheet versions.”

Feature	What is known	Customer value / safe wording
WhatsApp integration	WhatsApp integration is included in the product brief.	“CloudDesk CRM includes WhatsApp integration.” Do not invent supported message types, automation, or provider details.
Automatic follow-up reminders	Automatic reminders are listed as a feature.	“It helps the team remember follow-ups with automatic reminders.” Do not claim a specific notification channel or scheduling rule.
Fast setup	The brief says five-minute setup.	“The setup is designed to be quick—around five minutes, according to the product brief.” Avoid guaranteeing a result for every setup.

4. Customer Fit and Discovery

Best-fit prospect

• A sales team of around 10–20 people.

• Leads are currently tracked in Excel or across multiple spreadsheet files.

• Team members experience version conflicts or difficulty seeing the same pipeline.

• Follow-ups are easy to miss or are managed manually.

• The prospect wants to explore a shared pipeline, reminders, or WhatsApp integration.

Useful discovery questions

• “How are you tracking your leads today—Excel, a CRM, or something else?”

• “How many people on your team need to manage leads?”

• “Do team members ever end up with different versions of the sales sheet?”

• “How do you keep track of follow-ups today?”

• “Would WhatsApp integration be useful for your sales workflow?”

> Sales guidance: Ask one question at a time. Listen to the answer, then connect only the relevant known feature to the customer's stated problem. Do not recite every feature in one turn.

5. Objection Handling

“It is expensive.”

Suggested response: “The Growth plan is ■799 per user per month. If missed follow-ups or spreadsheet confusion are costing your team time, a short demo could help you assess whether it is worth it. Would you like a free live demo this week?”

Guardrail: Do not claim guaranteed savings or a specific ROI.

“We already use Excel.”

Suggested response: “That makes sense. CloudDesk CRM is designed for teams that want one shared sales pipeline instead of managing multiple spreadsheet versions. How many people update your lead sheet today?”

Guardrail: Acknowledge first; ask a discovery question.

“I need to discuss it with my team.”

Suggested response: “Of course. I can share the pricing and feature summary for your team to review, then follow up in two to three days. Would that work?”

Guardrail: Only say an email has been sent after a real email action succeeds.

“Not interested.”

Suggested response: “No problem—thanks for your time. Have a great day.”

Guardrail: Close politely; do not continue pressuring the customer.

“Does it support [unlisted feature]?”

Suggested response: “I don’t have confirmed information about that feature, and I don’t want to mislead you. I can note the question for the team to confirm.”

Guardrail: Never guess or imply the feature exists.

“Can I get a discount?”

Suggested response: “I can confirm the listed Growth-plan price is ■799 per user per month. I don’t have confirmed discount information, but I can note that you’d like the team to discuss pricing.”

Guardrail: Do not invent discounts.

6. Demo and Buying-Intent Guidance

Demo offer: A free live demo is offered this week with no commitment. The actual date and time availability are not included in this document, so the agent must not claim a booking is confirmed without checking a real scheduling system.

Strong buying signals: Asking for pricing, requesting a demo, asking how to get started, or asking about fit for the customer's team. Respond helpfully and offer the next step; do not mark the deal as converted based only on a question.

Conversation outcome labels:

• **Converted:** The customer clearly agrees to buy or sign up.

• **Demo Requested:** The customer agrees to a demo or explicitly requests one.

• **Follow-up Required:** The customer wants to think about it, consult the team, or continue later.

• **No Response:** Use only if the customer says nothing at all or hangs up before engaging. If they answer even one question, do not use this label.

• **Not Interested:** The customer declines and the conversation ends politely. Keep this distinct from “No Response.”

7. Knowledge Boundaries and Escalation

The following details are **not specified** in the supplied brief. The agent must say that it does not have confirmed information, ask whether the customer would like the team to follow up, or record the question for human review.

• Integrations beyond WhatsApp.

• Specific WhatsApp capabilities, supported providers, templates, or messaging limits.

• Lead import/export, reporting, dashboards, mobile apps, permissions, or API availability.

• Security certifications, data residency, encryption details, and regulatory compliance.

• Refunds, cancellation terms, service-level agreements, uptime, and customer support hours.

• Discounts, annual pricing, taxes, invoices, additional fees, or other plan tiers.

• Exact demo time slots, onboarding services, and implementation guarantees.

Approved fallback

> “I don’t have confirmed information about that yet, and I don’t want to give you the wrong answer. I can note it for the Sankar Group team to confirm.”

Do not claim to have emailed, booked a demo, created a lead, or scheduled a follow-up unless the relevant tool/action actually succeeded.

8. Voice-Agent Response Style

• Default to simple English; mirror the customer's language or mix (including natural Hinglish) when clear.

• Keep spoken replies short—usually one to three sentences.

• Be friendly, clear, and respectful. Do not pressure the customer.

• Ask one question at a time and wait for the answer.

• Use product facts retrieved from this knowledge base; do not treat an unsupported guess as a fact.

• When information is missing, be transparent and offer a human follow-up.

• For the application response schema, keep output valid JSON with exactly: reply, sentiment, topic, buying_intent. Validate JSON programmatically.

9. Example Queries for RAG Testing

Test question	Expected retrieved fact / behavior
What does CloudDesk CRM do?	Product overview; shared pipeline, reminders, WhatsApp integration.
Price kya hai per user?	Growth plan is ■799 per user per month.
How much would it cost for 15 users?	15 × ■799 = ■11,985 per month, before any unspecified taxes or additional charges.
We use Excel. Why should we change?	Shared pipeline and reduced version conflicts; ask how the team tracks leads today.
Can you guarantee a five-minute setup?	The brief describes fast setup in about five minutes; do not guarantee every setup will take exactly five minutes.
Does it integrate with Salesforce?	Not specified; do not claim support.
Do you offer a free trial?	A free live demo is offered this week; a free trial is not specified.
Can you book a demo tomorrow at 4 PM?	Offer the demo, but confirm actual availability through a scheduling system before saying it is booked.
Can I get an annual discount?	Discounts and annual pricing are not specified.
I need to discuss with my manager.	Offer to share pricing and feature summary, then follow up in 2–3 days; only claim sending after actual email action.
Not interested.	Thank the customer and close gracefully.
What security certifications do you have?	Not specified; offer to get the team to confirm.

10. Suggested RAG Metadata

When chunking this PDF, attach metadata so retrieval can be filtered and debugged. For this small demo, a simple metadata schema is enough:

Field	Example	Why it helps
source	clouddesk_crm_knowledge_base.pdf	Trace each retrieved chunk to its document.
section	pricing_and_offer	Makes retrieved content easier to inspect.
product	CloudDesk CRM	Useful if more products are added later.
version	1.0	Helps manage future document updates.

11. Interview Talking Points

• The PDF is the knowledge source; product details are not embedded as a long product brief in the system prompt.

• RAG retrieves relevant chunks at query time and passes them to the LLM as grounded context.

• The prompt still defines behavior, tone, response schema, and safety boundaries; RAG supplies changing product facts.

• Evaluate retrieval with representative questions, including unsupported-feature questions that should trigger a safe fallback.

• For a production-grade system, add document versioning, access controls, PII handling, retrieval logging, evaluation, and a human handoff path.

> A realistic architecture is not just “PDF + LLM.” Explain ingestion, chunking, embeddings, vector search, context assembly, answer generation, JSON validation, and voice orchestration. This demo knowledge base is intentionally compact.

End of document • Demo knowledge base v1.0
